UC Irvine School of Law to Hold Conference on Energy Development and Environmental Laws on Oct. 3

UC Irvine School of Law's Center for Land, Environment, and Natural Resources will co-sponsor the First Annual Emerging Issues in Environmental Law Policy and Practice Symposium on Thursday, Oct. 3. The topic: The Collision of Energy Development and Environmental Laws. Rapidly changing around the world, energy development poses new economic and environmental challenges on a daily basis. Many companies are making long-term investment and supply chain decisions based upon climate change models. "Zero' emission vehicles have changed the point of emissions from the tailpipe to the power plant, but those emissions are only as "clean' as the source that generates the power. Laws and regulations are adapting to the changing world of energy development, and this year's conference discusses the law, politics and policies influencing these changes.
